## Information Report

**Report to:** Mayor and Members of Council  
**From:** Harold Duff, CAO/Clerk  
**Subject:** Noelville Landfill Site – Office Construction  
**Date:** March 25, 2013.

---

### Summary of matter to date

On Thursday March 21<sup>st</sup> Councillor Mike Bouffard, construction contractor Doris Beaulieu, Environmental Services Manager Kyle Anderson, and I met to discuss the differences between the wood and concrete floors.

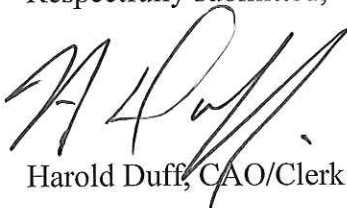

### Update

For information purposes, the Manager of Environmental Services requested the professional opinion of the Chief Building Official (CBO) on which type of floor construction he would recommend.

The CBO indicated that he would recommend the use of a concrete slab on grade floor for the landfill service building. He further suggested that a wood would not be suitable for a commercial or industrial application such as the landfill building. The reasons he outlined for recommending a concrete floor are as follows:

- Longevity: In a commercial/industrial use such as at the landfill site a concrete floor is more likely to last for the life of the building. A concrete floor is also much lower maintenance.
- Durability: A concrete floor is more resistant to moisture should there be any water leaks or roof leaks, whereas a wood floor is susceptible to water damage from possible leaks and moisture buildup from underneath the floor.

Respectfully submitted,

Harold Duff, CAO/Clerk
